The ADHD-RS-IV with Adults Prompts is an 18-item scale based on the *DSM-IV-TR*\* criteria for ADHD that provides a rating of the severity of symptoms. The adult prompts serve as a guide to explore more fully the extent and severity of ADHD symptoms and create a framework to ascertain impairment.

The first 9 items assess inattentive symptoms and the last 9 items assess hyperactive-impulsive symptoms. Scoring is based on a 4-point Likert-type severity scale: 0 = none, 1 = mild, 2 = moderate, 3 = severe. Clinicians should score the highest score that is generated for the prompts for each item.

Example: if one prompt generates a "2" and all others are a "1," by convention, the rating for that item is still a "2." Significant symptoms in clinical trials are generally considered at least a "2" - moderate.
